

Automated Pavement Data Collection Solutions

Transportation Asset and Infrastructure Management Conference

October 28, 2019

Presentation Overview

Introduction

- Presenter
- What Is Pavement Management?

Services

- Project Level Services
- Network Level Services

Technology

- What Is LCMS?
- What Comes Out of LCMS?
- LCMS Workflows

Market

- Why Pavement Management Is Needed

Project Examples

Presenter

Ken Contrisciane

- Project Manager GIT – Hamilton, NJ
- 18+ years of service with Michael Baker
- Technical lead in automated pavement data collection
- Broad range of GIS related experience on numerous transportation asset management/inventory projects at local, county and statewide levels.

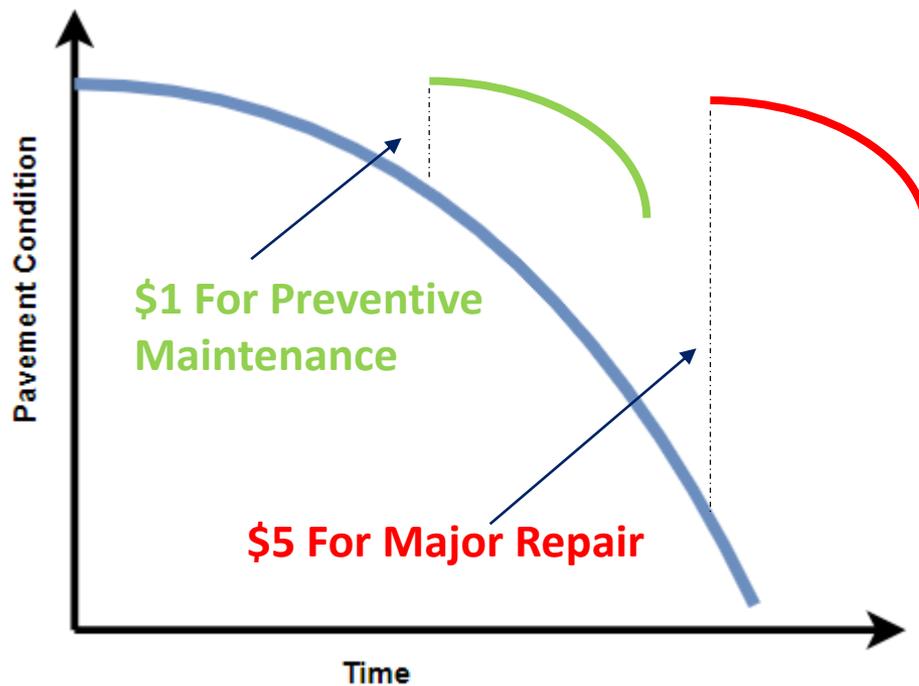

E: kcontrisciane@mbakerintl.com

O: 609-807-9551

What Is Pavement Management?

*“The science of managing limited resources effectively, by applying the **right treatment**, on the **right road** at the **right time**”*

Pavement Management Services

- Project Level
 - Engineering Design Services
 - Ground Penetrating Radar (GPR), Coring, FWD, Skid Testing
- Network Level
 - **Automated* Pavement Data Collection**
 - Custom data processing and categorization
 - Analysis and Reporting
 - Enterprise Pavement Management System Integration
 - Program Management
 - Project Prioritization
 - Training

Pavement Services - Project Level

- Traditional Pavement Data Collection
 - Coring
 - Pavement depth, type and subgrade
 - Falling Weight Deflectometer (FWD)
 - Structural capacity testing
 - Ground Penetrating Radar (GPR)
 - Identify pavement type, thickness and voids

Pavement Services – Network Level

- Automated* Pavement Data Collection

LCMS - Laser Crack Measurement System

5 High Def ROW Cameras

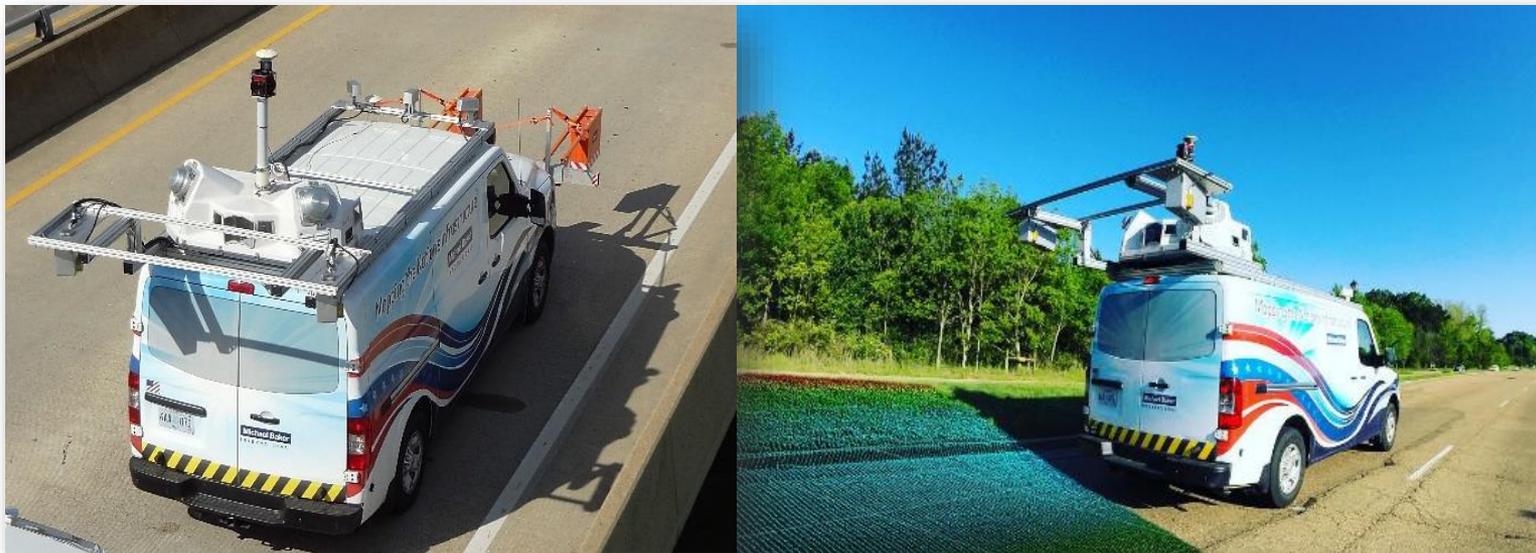

High Speed Profiler (IRI)

Laser Crack Measurement System

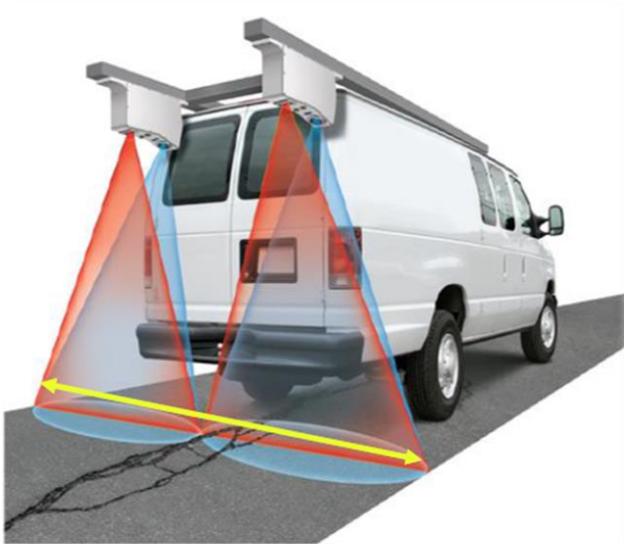

Laser Crack Measurement System

- What is LCMS and how does it work
- What comes out of LCMS
- LCMS Workflows

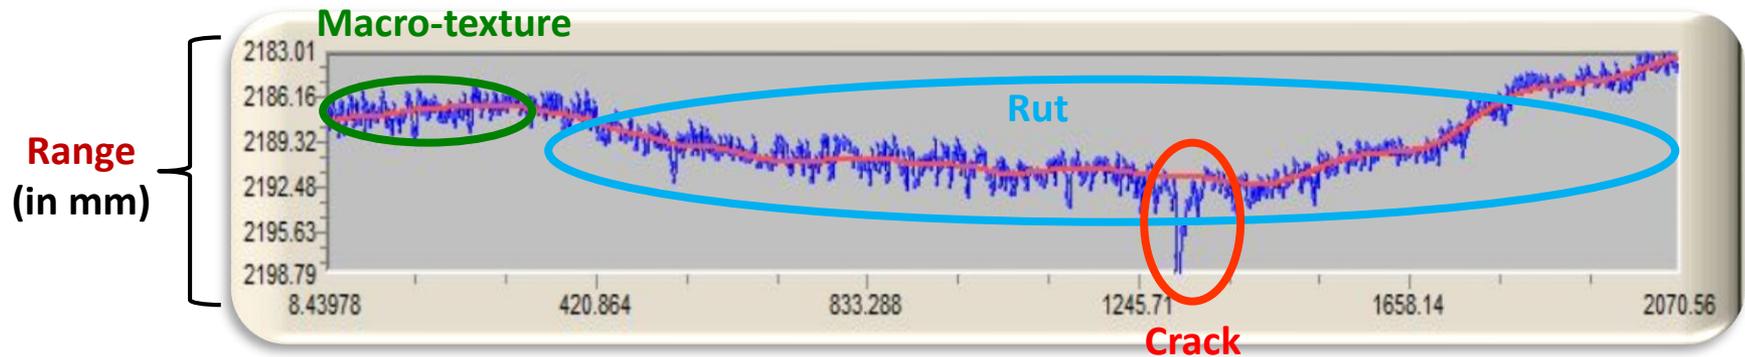

What is LCMS?

- Mobile-based Automatic* Pavement Distress Detection
 - Double Laser Sensor Array
- One Inventory, Many Outputs
- Pavement Management Tool

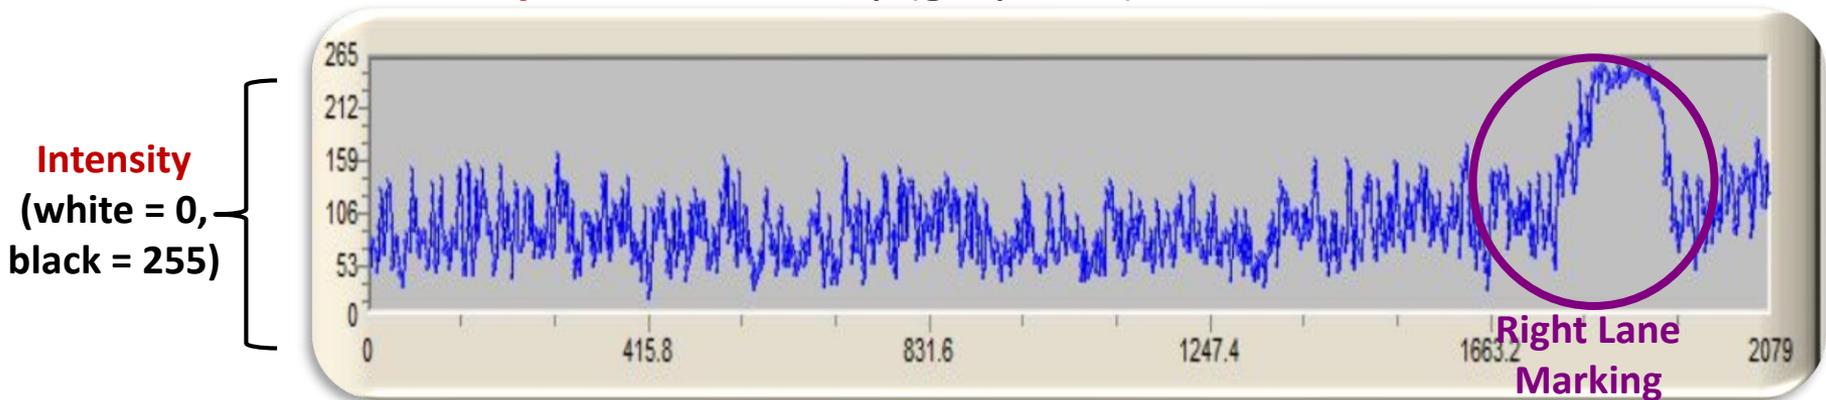

How LCMS Works

- Sensors Detect Two Primary Attributes:
 - **Range:** Distance between sensor and ground

- **Intensity:** Laser intensity (greyscale)

How LCMS Works

RANGE

INTENSITY

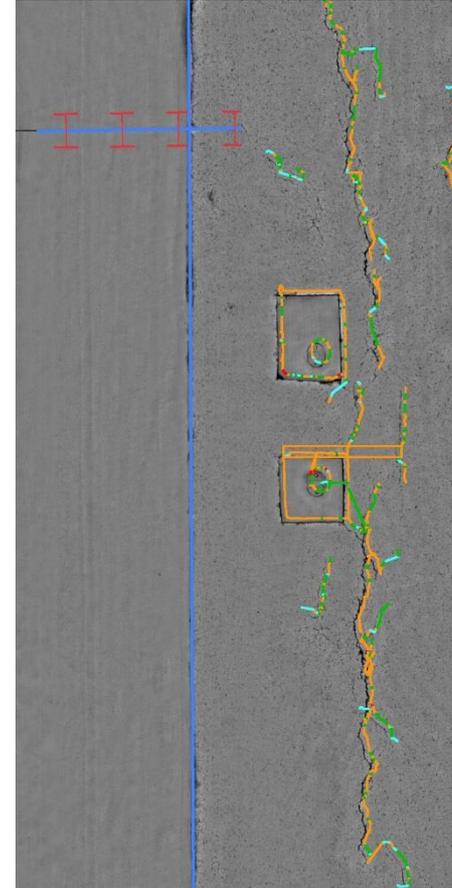

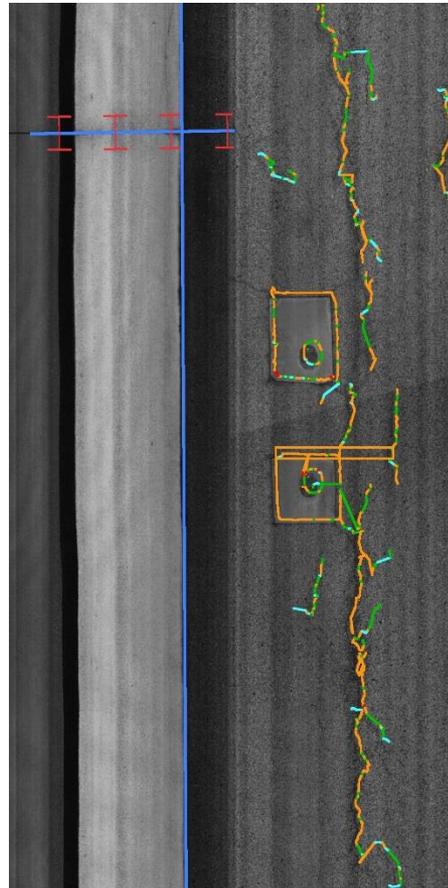

Crack Severity

Very Weak

Weak

Medium

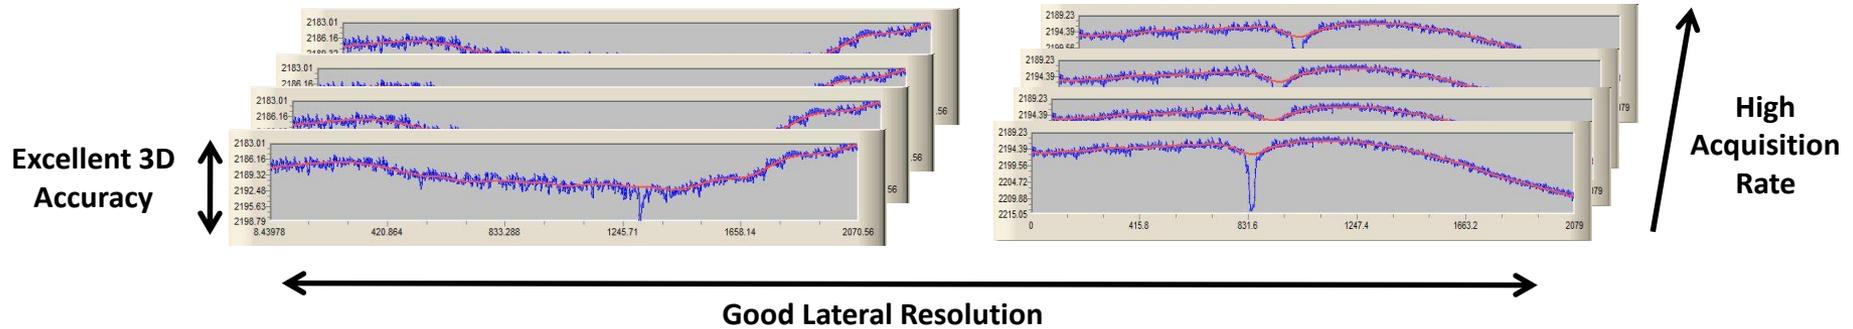

Severe

26.4'

How LCMS Works

LCMS Specifications	
Acquisition Rate	11,200 profiles/s
Range Accuracy	0.5mm
Lateral Resolution	1mm (FOV = 4m)
Nbr of points/sec	45 million 3D and 2D points/s

1 Gigabyte of data per mile

What Comes Out of LCMS?

- One Inventory, Many Outputs
 - Pavement Condition Features:
 - Transverse Profile
 - Sealed Cracks
 - Transverse Cracks
 - Bleeding
 - Potholes
 - Rutting
 - Joint Faulting
 - Alligator Cracking
 - Longitudinal Cracks
 - Raveling
 - Macro Texture
 - International Roughness Index (IRI)

What Comes Out of LCMS?

- Raw Data: XML and Imagery

```

4 <SurveyInfo>

29 <Speed_kmh>46.728</Speed_kmh>
30 <AcquisitionResolution_mm>5.000</AcquisitionResolution_mm>
31 </RoadSectionInfo>
    
```

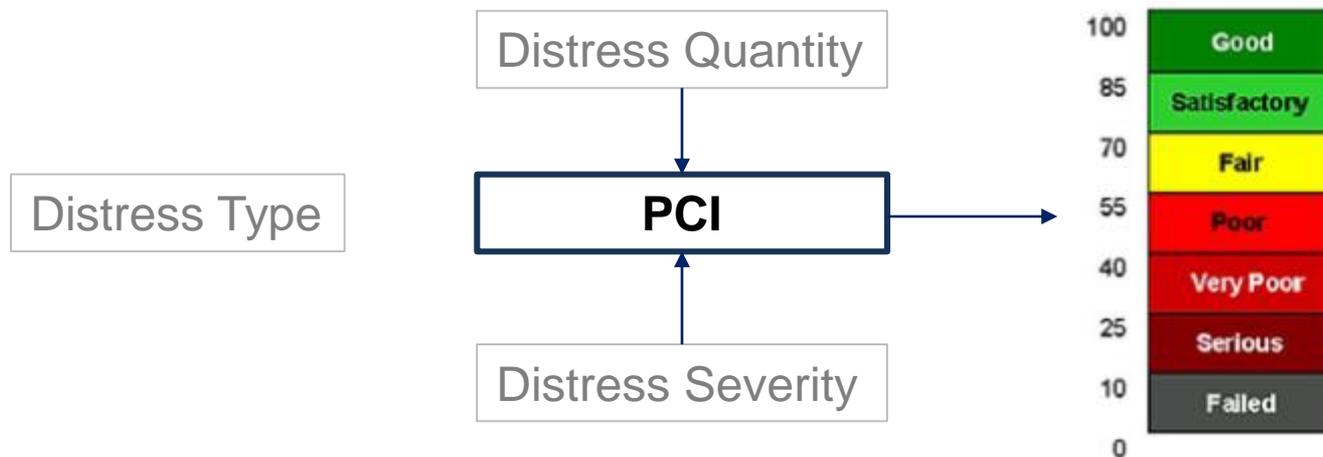

What Comes Out of LCMS?

What Does **NOT** Comes Out of LCMS?

Pavement Condition Index (PCI)

- An indicator of overall performance of pavement surface
- Scores from **0** to **100** based on established standards

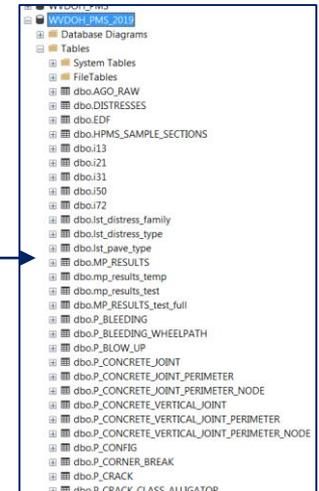

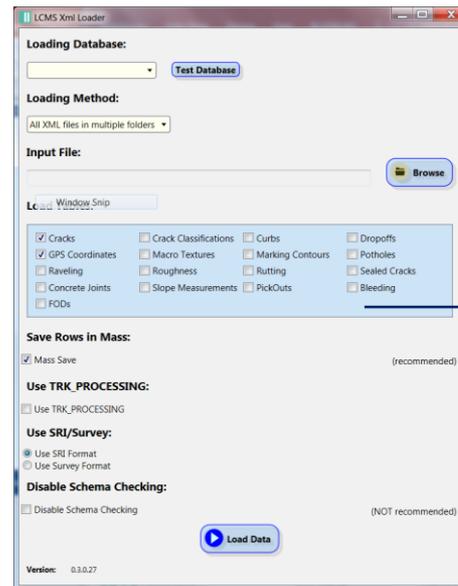

LCMS Post Processing Workflow

- Defined LCMS Enterprise Database Schema
- Processing Tools & Applications
 - Field Data Checker
 - XML Data Loader
 - ROW Imagery Loader
 - **Distress Selector**

```

```

LCMS Post Processing Workflow

- Distress Selector Application
 - LCMS cannot classify certain types of distress. Distress Selector fills the gap.

WVDOT PMS_2019 Distress Selector

RID: 1040008000000

LCMS Post Processing Workflow

- Robust Tracking System
 - Field Collection Tracking
 - ArcGIS Online, Collector, Survey123 & Microsoft Flow

LCMS Post Processing Workflow

- Robust Tracking System
 - Office Processing Tracking
 - Microsoft PowerBI

Why LCMS?

- **Speed**
 - Can operate at normal traffic speeds (up to 60 MPH)
- **Accuracy**
 - Millimeter level crack detection capability
- **Repeatability**
 - Consistent and reliable results
- **Day or Nighttime Operation**
 - Efficiency
- **Safety**
 - Crews stay in vehicle

Why Pavement Management Is Need?

Regulations

- **Highways & Roads – FAST Act**

- National Pavement Performance Measures established in 2018
- State DOT's required to collect & report certain aspects of pavement condition
 - *IRI, Rutting, Cracking Percent, Faulting*
- Equipment & Operator Certification
- Potential \$\$\$ penalties if not met

- **Airports – AC 150/5380-7B**

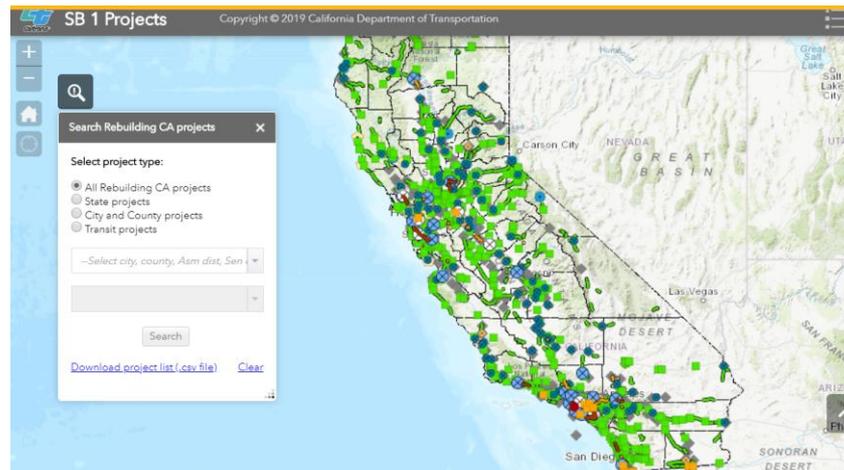

- Discusses Airport Pavement Management Program (PMP)
- Required for certain projects funded with federal \$\$\$
- Key component of PMP is ability to track & collect pavement data

Why Pavement Management Is Needed?

Regulations – State Specific

- Case Example: California
 - **SB 1** – [Road Repair & Accountability Act of 2017](#)
 - Dedicates \$54 billion (state funding) towards transportation infrastructure improvement and repair.
 - Split equally between the state highway system and local agencies (cities / counties)

Project Examples

- West Virginia Department of Highways (WVDOH)
 - [Pavement Data Viewer](#)
- Pennsylvania Turnpike Commission (PTC)
 - [PTC Pavement Data Viewer](#)
- Dallas Fort Worth Airport (DFW)
 - [ArcGIS Web Application](#)
- BWI Airport
 - Runway Blister Analysis
